### **Horn Creek Water Treatment Plant Project September 28 – October 9, 2009**

All 98 auger cast pilings, the structural concrete and rebar that will support the building, have been installed with clean up from the installation being completed on October 9, 2009. Installation of the directional drilled waterline and electrical conduit has been completed and now need to be finished up with vaults for the conduit and air-reliefs and valves on the waterline.

The concrete thrust blocks have been poured for the pasture pipeline fittings; these will help further restrain the fittings from movement and possible leakage and subsequent failure. With the ensuing rains and winds sure to come, it is now a rush to finish-up particular aspects of the project and make the rest suitable to resist the weather.

The week of October 12-16 will have the carpenters setting up concrete forms and getting things ready for the rebar installers. With any luck, we may be pouring concrete by the last week in October.

Check back next week for more updates or call our office at 503-965-6636 or on the web at: [www.pcjwsa.com](http://www.pcjwsa.com)
